

## REAL TIME WAREHOUSE SCANNING

In order to keep all goods handlings inside a warehouse as efficient as possible it is very important that goods are processed in an optimal manner and that maximum efficiency is found during storage and processing. Barcode scanning can mean an enormous added value for the management of a warehouse, not only an increase in productivity but also

more accuracy in the processing of data.

Logiqstar not only offers an Inventory Management System that enables the management of goods and all operations inside the warehouse in the most ideal way, but also offers you a seamless integration with real time barcode scanning hardware and software.

### Using the scanner, you can perform the following:

- ✓ Goods Receipt & Put away : Checking of received goods in relation to the orders, add additional information, print labels and define a location.
- ✓ Goods Picking : Advise an outbound order with picked goods or complete picking directly from the scanner in relation to a pre picking order created by back office.
- ✓ Outbound or shipping : once goods are correctly picked they can be processed for shipping.
- ✓ Transform goods directly from the scanner:
  - ✓ Reallocation of a certain quantity of items from one physical unit (e.g. pallet) to another
  - ✓ Change of location
- ✓ Print out location or goods labels based on BarTender® label templates from the Inventory Management System or directly from the scanner. Within BarTender® it is possible to design your own label templates for different purposes.

Moreover, within Logiqstar you can configure which fields and data should be visualized on the scanner screen when performing different scanning actions.

All scanning actions are real time processed via webservice which enables back office users to see immediately what was already scanned on location or what was already shipped.

Real Time Warehouse Scanning improves the flow of goods, optimizes the available warehouse space, increases the efficiency of warehouse staff and improves the overall quality of service.

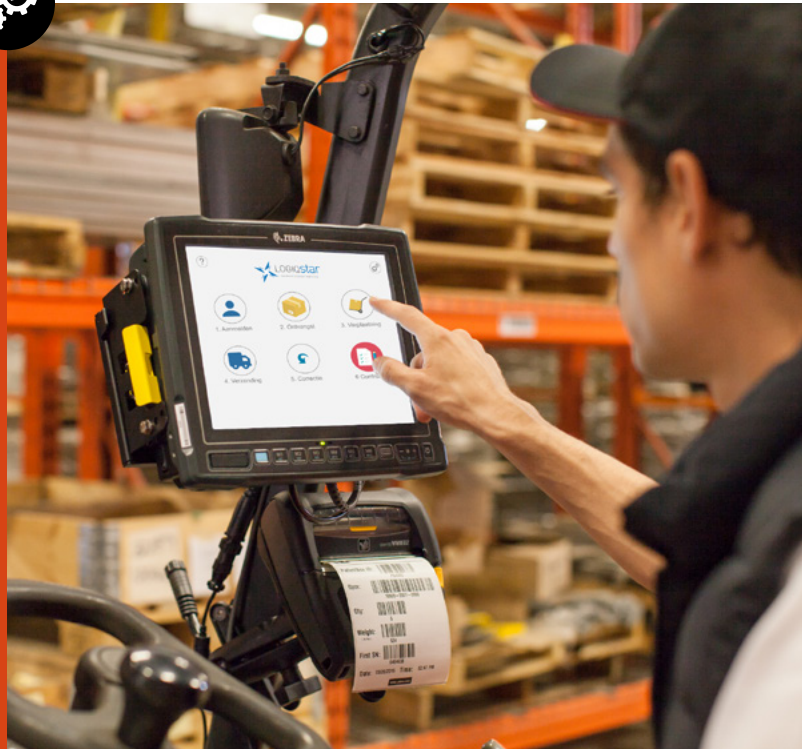

## HARDWARE & INFRASTRUCTURE:

Together with our partner we can provide you with an entire solution from hardware to software with innovative technology.

We offer a wide range of auto-ID products. After all, every scanning application has a specific working environment, ranging from light to heavy industrial. Aspects such as ergonomics (display, keyboard, weight), robustness, temperature range, dust and water tightness, but also expandability and user-friendliness are among the selection criteria.

Barcode scanners, handheld terminals, forklift terminals, label printers and WIFI infrastructure can be provided by us and IT technically implemented. We consider it our job to give you an as complete overview as possible, to propose the best suitable products and to offer the right solution.

## BARCODE PRINTERS & LABELS:

Print professional labels and barcodes for use in the warehouse, depending on the label type you need, we select the correct printer for you. The frequency of printing will be a first selection criteria.
